---

---

---

---

---

---

---

---

The cyber-world @ Harvard Extension

- This is one of a pair of courses we teach
- Each course stands alone
- They can be taken in either order

**Not just security!**

E45a focuses on the foundational building blocks: hardware, software, networks, security fundamentals, and history

E45b focuses on the real world: privacy, trust, surveillance, threats, conflict, commerce, etc.

3 Copyright © Scott Bradner & Ben Gaucherin 2016

---

---

---

---

---

---

---

---

## The cyber-world @ Harvard Extension

- These two courses are on the optional list for the Harvard Extension Cybersecurity Certificate  
With these two courses, you are half-way to the certificate.  
To complete the certificate you need two courses from the list of required courses taken within three years, scoring B or better

4

Copyright © Scott Bradner & Ben Gaucher in 2023

---

---

---

---

---

---

---

---

## Agenda

- Scott  
A brief introduction to Scott
- Ben  
A brief introduction to Ben
- Course logistics  
All the practical details you should know about this course
- Course content  
An overview of the content we will cover in the course

5

Copyright © Scott Bradner & Ben Gaucher in 2016

---

---

---

---

---

---

---

---

## Topics, contd.

- CSCI e45a recap - O  
A run through all the modules of e45a, for those who were and were not there

**Introduction**  
**Scott Bradner**

CSCI E 45: The Cyber World

1 © 2016 by Scott Bradner & Ben Gaucherin

---

---

---

---

---

---

---

---

**Scott Bradner**

- Retired in late 2016 from Harvard Office of the University CTO
- Senior Technical Consultant
- ~25 in Harvard central IT
- ~25 years at Harvard Psychology Department
- Created and managed Network Device Test Lab

2 © 2016 by Scott Bradner & Ben Gaucherin

---

---

---

---

---

---

---

---

**Scott Bradner, networking**

- Installed Harvard's first inter-building data network
- Harvard's initial ARPANET & NSFNet technical contact
- Co-founded NEARnet New England regional data network  
Chair of NEARnet technical committee

3 © 2016 by Scott Bradner & Ben Gaucherin

---

---

---

---

---

---

---

---

### Scott Bradner, IETF

**I E T F**

- Involved in IETF between 1989 and 2016
- Started attending in 1990
- Co-director of multiple areas
  - Operational Requirements
  - IP Next Generation
  - Transport
  - Sub-IP
- On IESG for 10 years
- Authored > 40 RFCs
- Chaired 7 working groups

4

---

---

---

---

---

---

---

---

### Scott Bradner, teaching

**NETWORLD  
+ INTEROP**

- Senior preceptor –  
Computers in Psychology for  
~8 years
- Instructor –  
Networld+Interop & private  
classes
- Instructor – Harvard  
Extension school since 1995  
Petra T. Shattuck Excellence in  
Teaching Award

5

Introduction  
Course logistics

CSCI E 45b: The Cyber World – part B

1 Copyright © Scott Bradner & Ben Gaucherin 2016

---

---

---

---

---

---

---

---

Course structure

- Runs over 14 weeks
- One or more modules posted per week (on Sunday mornings)
  - No posting during vacation
- The modules were taped between 2015 and 2016
- But the world changes continuously, so we post updates when necessary

2 Copyright © Scott Bradner & Ben Gaucherin 2016

---

---

---

---

---

---

---

---

Course structure, contd.

- Each module includes multiple topics
- Most topics are “required”
  - i.e. they are included in the exams
- Some are optional

3 Copyright © Scott Bradner & Ben Gaucherin 2016

---

---

---

---

---

---

---

---

### Teaching Assistants (TAs)

- We have a number of Teaching Assistants who ...  
Are here to help you and answer questions you might have about the course  
Help prepare and grade the exams  
See the list of TAs on the course website

4

Copyright © Scott Bradner & Ben Gaucher in 2016

---

---

---

---

---

---

---

---

### Contacting us

- We have a teaching staff email list that includes both instructors and the TAs [e45b@sobco.com](mailto:e45b@sobco.com) to be used for:  
Any question about the course  
Requests for grading reconsideration  
Letting us know of interesting world events relating to the course

**Use [e45b@sobco.com](mailto:e45b@sobco.com) for ALL communication about the course – do NOT use Canvas**

5

Copyright © Scott Bradner & Ben Gaucher in 2022

---

---

---

---

---

---

---

---

### Slides & handouts

- Slides comprise talking points
- Not sufficient by themselves
- Illustrations on the slides attempt to be relevant
- PDF of the handouts posted along with videos  
For use only with the class, please do not reproduce for other uses

**no longer just a request, the school now prohibits copying**

6

Copyright © Scott Bradner & Ben Gaucher in 2023

---

---

---

---

---

---

---

---

## Reading

Dr. Betty Sparrow

Jerry Liu

Daniel Wagner

- Lots (and lots) of reading
- By design, lots of reading - comes with the territory
- We do not expect you to actually read every word
- We want you to learn how to “read smart”
- Get the gist of the reference and understand where to find the information later

7

Copyright © Scott Bradner & Ben Gaucherin 2016

---

---

---

---

---

---

---

---

## Check Your Understanding quizzes

- Short quizzes in some modules
- Meant to help you validate that you understand the material in the module
- Optional
- Do not factor in the course grade

8

Copyright © Scott Bradner & Ben Gaucherin 2016

---

---

---

---

---

---

---

---

## Discussions

- Click on Discussion to find discussion topics
  - Module discussions
  - “News you can use” discussions
  - Other topic discussions
- Your participation is not monitored or graded but you may find it useful

9

Copyright © Scott Bradner & Ben Gaucherin 2016

---

---

---

---

---

---

---

---

### Other things you should know...

Chaucer – Canterbury Tales

- English  
All readings are in English
- How to use the Internet  
All readings are on-line
- The basic structure of the U.S. legal system  
Unless stated otherwise, exam questions are to be viewed in the U.S. legal context

10

Copyright © Scott Bradner & Ben Gaucherin 2016

---

---

---

---

---

---

---

---

### News You Can Use (NYCU)

- Each week will include “News You Can Use”
- We will report on news items involving Internet technology, security, policy issues or developments to tie the course to current events
- We expect you to follow-up and find out more about these issues

11

Copyright © Scott Bradner & Ben Gaucherin 2016

---

---

---

---

---

---

---

---

### News You Can Use (NYCU), contd.

- News topics not included in the handouts
- Separate list of article titles posted in an on-line Discussion  
URLs not posted because we want you to look around at other coverage
- The news topics are part of the course and therefore will be part of the exams
- Please send interesting ones to the teaching staff email list

12

Copyright © Scott Bradner & Ben Gaucherin 2016

---

---

---

---

---

---

---

---

### News you can use – Follow Bruce!

- <https://www.schneier.com/>
- Special case  
Publishes relevant material  
regular basis
- Some of his postings will  
be on the exams

13

Copyright © Scott Bradner & Ben Gaucherin 2016

---

---

---

---

---

---

---

---

Introduction  
Exams

CSCI E 45a: The Cyber World – part A

1 Copyright © Scott Bradner & Ben Gaucherin 2018-2021

---

---

---

---

---

---

---

---

Exams and grading

- 4 exams

Take on-line at-home, open book/Internet  
25 questions each, 4 points max per question

Exams are **cumulative**

Exams open at 9 AM on a Wednesday and close at 9 AM the following Wednesday

You must complete the exam within 5 days of opening it or by the end of the window whichever comes first

**Open 9AM to 9AM a week later**

Verify that you will have time to do the exams or please drop the course

2 Copyright © Scott Bradner & Ben Gaucherin 2018-2021

---

---

---

---

---

---

---

---

Exams and grading, contd.

- Read exam questions carefully as some of them **may** be misleading
- By “misleading” we mean “carefully worded”  
e.g., might ask *how does x do y* when x does not do y
- The course topics involve precision  
You need to know just what problem you are trying to solve and be able to say clearly what the solution is

3 Copyright © Scott Bradner & Ben Gaucherin 2018-2021

---

---

---

---

---

---

---

---

### Exams and grading, contd.

- The real world does not present clear questions, neither do we
- We use the exams to see if you understand & can explain the material
- Answer the exam questions as you would answer technical questions from your boss
  - Clear and to the point

4

Copyright © Scott Bradner & Ben Gaucherin 2018-2021

---

---

---

---

---

---

---

---

### Exams and grading, contd.

- Hints
  - If the question includes “true or false?” your answer needs to have the word “true” or the word “false” in it for full credit
  - If the answer to the question is “ICMP” then “ICMP” or “Internet Control Message Protocol” must be in your answer.
  - If the question has two parts, so must your answer
  - Think about why we asked the question – what did we want to know?

5

Copyright © Scott Bradner & Ben Gaucherin 2018-2021

---

---

---

---

---

---

---

---

### Exams and grading, contd.

- Extraneous information
  - Unless the question asked you to explain ICMP, any explanation of ICMP will be “extraneous information”
    - One student provided a 320 word answer where “ICMP” was enough
  - Extraneous information makes it hard to tell if you know what you are talking about
  - One point will be taken off for any extraneous information
  - E.g., how TCP works, how the IETF makes standards, vulnerabilities in a protocol ... unless the question asks for it

6

Copyright © Scott Bradner & Ben Gaucherin 2018-2021

---

---

---

---

---

---

---

---

### Exams and grading, contd.

- i.e., answer the **actual question that was asked and only answer that question**  
Most questions can be answered in less than a dozen words – many in one or two words
- Goldilocks principle applies to your answers - **your answers should be as short as they can be without missing any key points**
- By the way, there is no need to repeat the question in the answer

7

Copyright © Scott Bradner & Ben Gaucherin 2018-2021

---

---

---

---

---

---

---

---

---

---

### Exams and grading, contd.

- The answers to all questions can be found in the lectures or reading (including NYCU)  
Google (or Bing) does not rule
- essay question concurrent with the last exam  
essay optional for undergraduates  
essay mandatory for graduates  
grade: 0-5 points

course grade

undergraduates =  $((e1 + e2 + e3 + e4)/4) + \text{essay}$   
 graduates =  $((e1 + e2 + e3 + e4)/4) * .95 + \text{essay}$

8

Copyright © Scott Bradner & Ben Gaucherin 2018-2021

---

---

---

---

---

---

---

---

---

---

### Grade Mapping

A:	93-100	<ul style="list-style-type: none"> <li>• scores are mapped into grades only at the end of the semester, and then only after any optional essay score is added as well as any possible curve</li> <li>• fractional values rounded up</li> </ul>
A-:	90-92	
B+:	87-89	
B:	83-86	
B-:	80-82	
C+:	77-79	
C:	73-76	
C-:	70-72	
D+:	67-69	
D:	63-66	
D-:	60-62	92.4999 = 92
E:	0-59	92.5 = 93

8A

Copyright © Scott Bradner & Ben Gaucherin 2018-2021

---

---

---

---

---

---

---

---

---

---

### Exams and grading, contd.

- Give **proper attribution** to any supporting citations
- Answers have to be in **your own words**
- Be smart!  
Individual not collaborative effort
- We are **required** to report potential plagiarism & collaboration to DCE

9

Copyright © Scott Bradner & Ben Gaucherin 2018-2021

---

---

---

---

---

---

---

---

### Use Your Own Words!

## Use your own words!

(If more than ~5 words)  
Do not just cut & paste  
We want to know if you understand

9A

Copyright © Scott Bradner & Ben Gaucherin 2018-2021

---

---

---

---

---

---

---

---

### Sample question #1

- Pirate Jill, who lives in the U.S., likes to download movies from her favorite torrent site. Due to lawsuits, the site will no longer service any host with a US IP address. Without moving out of the country, how can Jill continue to access this site?
- Use a VPN with server located outside the US
- Use a proxy located outside the US

10

Copyright © Scott Bradner & Ben Gaucherin 2018-2021

---

---

---

---

---

---

---

---

### Sample question #2

- Does a TCP acknowledgment guarantee that data has been received by the end user? Briefly explain.
- No, only that the receiving node's TCP stack has assumed the responsibility to deliver it.

11

Copyright © Scott Bradner & Ben Gaucherin 2018-2021

---

---

---

---

---

---

---

---

### The making of exam questions

- Try to test understanding of concepts
- Try to test thinking not just fact recall (but some fact recall)
- Answer not Googleable
- Test ability to see details (e.g., in the question itself)  
Note – if you have a hard time breaking a problem into logical parts you will not do well in this field

12

Copyright © Scott Bradner & Ben Gaucherin 2018-2021

---

---

---

---

---

---

---

---

Introduction  
Course content

CSCI E 45b: The Cyber World – part B

1 Copyright © Scott Bradner & Ben Gaucherin 2016

---

---

---

---

---

---

---

---

Course origins

- Initially two courses taught by Scott:
  - E132 – Advanced topics in Data Networking Protocols and Network Architectures
  - E170 – Security, Privacy and Usability
- Scope now entire “cyber world”
- Updating old content and adding new content
  - Security threats, cyber conflict, etc.

2 Copyright © Scott Bradner & Ben Gaucherin 2015

---

---

---

---

---

---

---

---

Who is this course for?

- Attempting to address a growing need/demand
  - No longer sufficient to be a “good computer user”
- Targeted at geeks, lawyers and other curious minds
- People who want to understand:
  - The technologies involved
  - Important ideas and concepts behind the technologies
  - Laws, policies, information security, etc.
- Now the foundation course for DCE’s Cybersecurity Certificate

3 Copyright © Scott Bradner & Ben Gaucherin 2015

---

---

---

---

---

---

---

---

### What this course is about

- Understanding of how the technical and policy elements of the cyber world work
- Promote critical thinking
- Promote multi-faceted views/approaches
- Learn from failure

*"There is no success like failure, and failure is no success at all!"*  
Bob Dylan: *Love Minus Zero/No Limit*

4

Copyright © Scott Bradner & Ben Gaucherin 2015

---

---

---

---

---

---

---

---

### What this course is NOT

- A detailed technology practitioner's course  
You don't need to be an engineer  
And it's definitely fine if you are one  
And it's okay if you don't want to become one
- In-depth in any one area – you won't become a topic expert from this course

5

Copyright © Scott Bradner & Ben Gaucherin 2015

---

---

---

---

---

---

---

---

### Overview of the modules

- Internet Governance & laws  
Who controls the Internet?
- Internet applications  
Finger, web, email, etc.
- Identity and authentication  
What is identity, and how to tie it to a person
- Trust & privacy  
Two key concepts at the center of a lot of debates

6

Copyright © Scott Bradner & Ben Gaucherin 2015

---

---

---

---

---

---

---

---

### Overview of the modules, contd.

- Security threats part I & II  
Exploring digital badness
- Protecting Infrastructure  
How breakable is the Internet?
- Usability, accessibility  
The human side of technology
- Cyber conflict  
Cyber warfare, weapons, etc.
- Commerce, DRM, etc.  
The Internet as a money making platform

7

Copyright © Scott Bradner & Ben Gaucherin 2016

---

---

---

---

---

---

---

---

---

---

### Overview of the modules, contd.

- Security management and mindset  
The what and how of internalizing security
- Surveillance & surveillance avoidance  
Trading privacy for safety? And trying to keep one's privacy
- Safe computing and networking  
Can following simple rules make you safer?

8

Introduction  
E45a review

CSCI E 45b: The Cyber World – part B

1 Copyright © Scott Bradner & Ben Gaucherin 2016

---

---

---

---

---

---

---

---

What you should remember from the first semester, even if you weren't there

This is an overview of the terminology and concepts covered in the first semester – **this material will not be included in the exams except where explicitly covered in this semester**

---

---

---

---

---

---

---

---

E45a Review: Digital tech & computing

Digital Technology and Computing Devices

- In cyberspace everything is bits
- What the bits mean depends on how you use them  
Bits = Data = Code
- From transistor, to wired logic, to programmable computers

$A \text{ AND } B = A \cdot B$   
 $A \text{ NOT } = \bar{A}$   
 $A \text{ AND } B = \overline{\bar{A} \cdot \bar{B}}$   
 $A \text{ NOT } = \bar{A}$   
 $A \text{ OR } B = A + B$   
 $A \text{ XOR } B = A \oplus B$

3 Copyright © Scott Bradner & Ben Gaucherin 2016

---

---

---

---

---

---

---

---

### E45a Review: Digital tech & computing

- “Power” of computers doubles every 18-24 months  
Interpretation of Moore’s Law
- Generic computing devices have a consistent set of parts/components  
Firmware/Boot software, CPU, interrupts, memory, Input/Output
- Key concepts  
Interoperability, Virtualization, and Redundant Array of things

4

Copyright © Scott Bradner & Ben Gaucherin 2016

---

---

---

---

---

---

---

---

### E45a Review: Internet history & concepts

- Internet History and Concepts**
- It all started with the telephone network but the telephone companies were not involved in Internet service until recently
  - Packet networking was developed in the 1960s to create a reliable communications infrastructure
  - The ARPANET was deployed starting in the last 1960s to share big computers
  - The Internet started with the switch to the Internet Protocol in 1983

5

Copyright © Scott Bradner & Ben Gaucherin 2016

---

---

---

---

---

---

---

---

### E45a Review: Internet history & concepts

- The Internet architecture is end-to-end (e2e) with a “stupid network”  
Intelligence is in the end nodes
- The Internet Protocol is a “common bearer service” that supports applications over different types of networks  
Hides network from applications and vice versa
- The Internet does not have any defined architecture

6

Copyright © Scott Bradner & Ben Gaucherin 2016

---

---

---

---

---

---

---

---

### E45a Review: Internet protocols

#### Internet Protocols

- Internet Protocol
  - “old” Internet protocol is IPv4– 32-bit addresses
  - “new” Internet protocol is IPv6– 128-bit addresses
  - Many small changes between IPv4 & IPv6
- IP is very simple – its only job is to deliver packets as best as it can
  - Uses destination IP address to forward packets
- Packets can be fragmented if they are too big for the network
  - Only by the source in IPv6

7 Copyright © Scott Bradner & Ben Gaucherin 2016

---

---

---

---

---

---

---

---

---

---

### E45a Review: Internet protocols

- Protocols ride on top of IP and are “end to end” (e2e)
  - Transmission Control Protocol (TCP)
    - Provides a reliable data stream with flow & congestion control
  - User Datagram Protocol (UDP)
    - Non-guaranteed packet transfers
  - Internet Control Message Protocol (ICMP)
    - Control & error messages
- For e2e protocols, only the end points are involved
  - The network is not involved

Ethernet Frame	IP Header	TCP or UDP Header	Application Header	Content Payload
----------------	-----------	-------------------	--------------------	-----------------

8 Copyright © Scott Bradner & Ben Gaucherin 2016

---

---

---

---

---

---

---

---

---

---

### E45a Review: Simple software

#### Software - Simple Software

- Operating systems are the runtime environment for applications and include:
  - Services, user interface, hardware drivers, utilities
- Creating an executable with compiled languages
  - Human readable programming language source code compiled to computer readable object code and linked into an executable
- Interpreted languages (e.g. BASIC)
  - A script interpreter processes the script

9 Copyright © Scott Bradner & Ben Gaucherin 2016

---

---

---

---

---

---

---

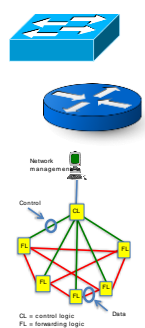

---

---

---

### E45a Review: Network technology

- Enterprise networks mixture of layer 2 and layer 3  
 Layer 2 – switched Ethernet & WiFi in “subnets”  
 Layer 3 – routers interconnect subnets and run Internet Protocol
- Internet service provider (ISP) architecture similar to enterprise IP networks  
 Customers connected to local “points of presence” (PoPs) – parts of ISPs connected with routers
- Software defined networks (SDN) used in cloud services  
 Architecture defined by software rather than wires

13 Copyright © Scott Bradner & Ben Gaucherin 2016

---

---

---

---

---

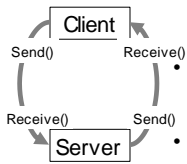

---

---

---

### E45a Review: Distributed systems

**Software – Distributed Systems**

- Distributed systems are the norm in a networked world  
 Complex website, large enterprise system, distributed computation, the Internet
- Basic model - Client/Server  
 But every system can be both a client and a server
- Key characteristics of distributed software  
 Physical separation, scalability, administrative autonomy, heterogeneity

14 Copyright © Scott Bradner & Ben Gaucherin 2016

---

---

---

---

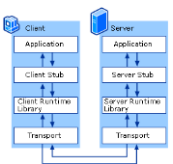

---

---

---

---

### E45a Review: Distributed systems

- Distributed systems architectures have evolved greatly over the past few decades  
 Mainframe, client/server 2 & 3 tier, web architectures, Service Oriented Architectures/Web Services
- Basic mechanics of software talking over a network  
 Remote Procedure Call (RPC), Interface Definition Language (IDL), XML/JSON
- Servers can be stateful or stateless  
 State can be stored in a variety of places (e.g., cookies)

15 Copyright © Scott Bradner & Ben Gaucherin 2016

---

---

---

---

---

---

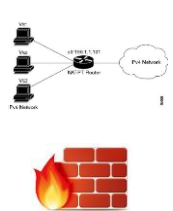

---

---

### E45a Review: Middleware

#### Internet and Enterprise Middleware

- **Network address translators (NATs)**  
Join one network to another – translate IP addresses in packets that traverse NAT  
Different inside and outside network address spaces  
Can break some protocols
- **Firewalls**  
Join one network to another – selectively block some traffic between networks

The diagram shows a local network with several PCs connected to a central router labeled 'NAT'. This router is connected to an external 'Internet' cloud. Below the NAT diagram is a graphic of a brick wall with a flame, representing a firewall.

16 Copyright © Scott Bradner & Ben Gaucherin 2016

---

---

---

---

---

---

---

---

### E45a Review: Middleware

- **Proxy servers**  
Intermediary between clients and servers  
Can cache information to improve performance  
Can hide client from server & bypass filters
- **Transparent caches**  
Cache information to improve performance
- **Load balancers**  
Intercept and distribute client requests among servers
- **Content switches**  
Intercept and distribute client requests among servers based on type of request

The diagram illustrates four types of middleware: 1. Proxy servers: Clients connect to a proxy server, which then connects to a server. 2. Transparent caches: Clients connect to a cache, which connects to a server. 3. Load balancers: Clients connect to a load balancer, which distributes requests to multiple servers. 4. Content switches: Clients connect to a content switch, which directs requests to different servers based on request type.

17 Copyright © Scott Bradner & Ben Gaucherin 2016

---

---

---

---

---

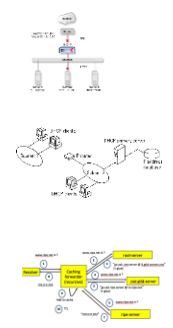

---

---

---

### E45a Review: Middleware

- **TLS/SSL accelerators**  
Offload secure communications processing
- **Dynamic host configuration protocol (DHCP) servers**  
Supply network information to network nodes during boot process
- **Domain name system (DNS) servers**  
Distributed name resolution service that converts DNS names into IP addresses

The diagram shows three types of middleware: 1. TLS/SSL accelerators: A server and client communicate through an accelerator. 2. DHCP servers: A client requests network configuration from a DHCP server. 3. DNS servers: A client requests IP address information from a DNS server.

18 Copyright © Scott Bradner & Ben Gaucherin 2016

---

---

---

---

---

---

---

---

### E45a Review: Middleware

Group A =  
( people determined by attributes )  
- ( people to be excluded )  
+ ( people to be included )

- Service discovery servers  
Enable hosts to find services such as printers
- Authentication services  
Offloads user authentication function  
Some can support "single sign on"
- Authorization services  
Offloads user authorization function  
Decides who can do what

19

---

---

---

---

---

---

---

---

---

---

### E45a Review: Building the infrastructure

#### Designing and Building the Infrastructure

- The tussles  
#1 - Optimizing resource allocation to demand/needs  
#2 - Reconciling resiliency, security, and complexity
- Residential infrastructure  
Single ISP, single dynamic IP address, not setup to deliver network services, not much redundancy built-in
- Enterprise infrastructure  
Large number of IP addresses, designed for resiliency, can deliver network services, one or more ISPs

20

Copyright © Scott Bradner & Ben Gaucherin 2016

---

---

---

---

---

---

---

---

---

---

### E45a Review: Building the infrastructure

- Enterprise - From the end-point to the ISP  
Core > Distribution > Access  
Network jack, WiFi, switches, data center, routers
- Generic Internet Service Provider architecture  
Regional/metropolitan hubs, POPs/COs, Head-ends, local aggregation points, last mile connectivity

21

Copyright © Scott Bradner & Ben Gaucherin 2016

---

---

---

---

---

---

---

---

---

---

## E45a Review: The cloud

NIST SP 800-145

### The Cloud

- Three main services:
  - Infrastructure as a Service (IaaS)  
You create and manage servers and network in the cloud
  - Platform as a Service (PaaS)  
Servers with full technology stacks ready to receive your software
  - Software as a Service (SaaS)  
Using software operated and managed by others

22

Copyright © Scott Bradner & Ben Gaucherin 2016

---

---

---

---

---

---

---

---

## E45a Review: The cloud

- Essential characteristics
  - Broad network access
  - Resource pooling
  - Rapid elasticity
  - Measured service
  - On-demand self-service

23

Copyright © Scott Bradner & Ben Gaucherin 2016

---

---

---

---

---

---

---

---

## E45a Review: The cloud

ITU-T X.1600

- Some challenges
  - Trusting the provider
    - Governance of technical decisions
    - Privacy
    - Security
    - Business
  - Availability
  - Lock-in

24

Copyright © Scott Bradner & Ben Gaucherin 2016

---

---

---

---

---

---

---

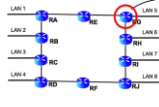

---

### E45a Review: Routing

**Enterprise and ISP Routing**

- “Routing” is forwarding packets towards a destination  
Using a destination address that is in the packet
- Routers exchange reachability information using a routing protocol  
Use info. to build a “routing table”  
Sends packet to next hop on “best path” to destination
- Two categories of routing protocols  
Interior gateway protocols (IGPs)  
Exterior gateway protocols (EGPs)

25 Copyright © Scott Bradner & Ben Gaucherin 2016

---

---

---

---

---

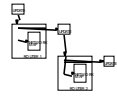

---

---

---

### E45a Review: Routing

- Interior gateway protocols  
Assume a unified trust domain  
Routing information protocol (RIP)  
Simple “distance vector” protocol  
Builds table of “lowest cost” next hops for possible destinations from updates that include reachability metric
- Open shortest path first (OSPF)  
Link state protocol  
Builds network topology map from updates that include link information  
Builds table of “lowest cost” next hops for possible destinations from information in network topology map

26 Copyright © Scott Bradner & Ben Gaucherin 2016

---

---

---

---

---

---

---

---

### E45a Review: Routing

- Exterior gateway protocol  
Does not assume trust  
Border gateway protocol (BGP4)  
Builds table of paths to possible destinations from updates that include paths to possible destinations  
Includes comprehensive tools to filter updates received and sent to control reachability

27 Copyright © Scott Bradner & Ben Gaucherin 2016

---

---

---

---

---

---

---

---

### E45a Review: Security fundamentals

#### Security Fundamentals

- “Security” means ensuring: Confidentiality, Integrity & Availability (C.I.A.)
- Security issues  
Failure to take care of the basics, people, buggy software, flawed computer/network setup/configuration, aiming for perfection, secrecy is not security (Kerckhoff principle)
- Understanding risk  
Humans not good at assessing risk  
An approach: Identify risk, assess likelihood & impact, prioritize, mitigate

28

Copyright © Scott Bradner & Ben Gaucherin 2016

---

---

---

---

---

---

---

---

### E45a Review: Security fundamentals

- Threat is a component of risk  
Need to identify the asset, threats to that asset, and probability of the threat being realized
- Attack trees  
A more formal approach to analyzing threats
- Mitigations  
Principles of secure software development, securing the physical environment, designing secure data networks, the risks of portable media, the risks of residual data on disk drives, enterprise security policies
- Crustacean security

29

Copyright © Scott Bradner & Ben Gaucherin 2016

---

---

---

---

---

---

---

---

### E45a Review: Encryption

#### Encryption

- Encryption – basic confidentiality tool  
Mathematically obscuring data in a reversible way  
Symmetric encryption systems  
One time pad, Enigma, DES, 3DES, AES  
Asymmetric encryption systems  
Public key encryption – Public/Private keys
- Hashes – basic integrity tool  
Creating a unique fingerprint of a chunk of data  
Basic hash, keyed hash

30

Copyright © Scott Bradner & Ben Gaucherin 2016

---

---

---

---

---

---

---

---

### E45a Review: Encryption

- **Digital Signatures**  
Hash of message encrypted with private key, verified with public key  
Provides integrity, authentication of origin/non-repudiation
- **Digital Certificates**  
Public key with one or more digital signatures  
To securely convey public keys
- **Certificate Authorities**  
A source of digital certificates  
Lots of CAs, with varying trustworthiness

public key  
signature

31 Copyright © Scott Bradner & Ben Gaucherin 2016

---

---

---

---

---

---

---

---

### E45a Review: Managing the infrastructure

**Managing the Infrastructure**

- **What are you managing?**  
Managing evolution, managing operations  
Managing the technology, the business, the experience of the user of the services
- **Management frameworks**  
Many of them, but you should still be thinking for yourself
- **ITIL – a good framework for services**  
Service Strategy, Service Design, Service Transition, Service Operation, Continual Service Improvement

32 Copyright © Scott Bradner & Ben Gaucherin 2016

---

---

---

---

---

---

---

---

### E45a Review: Managing the infrastructure

- **Management tools**  
Telephone world – large, complex holistic set of tools  
Internet world – simple, point solutions focused on reliable packet delivery
- **SNMP & NETCONF**  
IETF standards for managing IP networks and device configurations
- **Business Continuity (BC) & Disaster Recovery (DR)**  
Adjusting to suddenly changing conditions  
DR is asynchronous resiliency  
Business Impact Analysis (BIA), Mean Time To Fail (MTTF), Mean Time To Recovery (MTTR)

33 Copyright © Scott Bradner & Ben Gaucherin 2016

---

---

---

---

---

---

---

---

### E45a Review: Security tools

#### Security Tools

- **Blocking tools** – selectively block traffic  
Access Control Lists (ACLs), firewalls, Application Level Gateways (ALGs), virus checkers, spam filters, intrusion prevention, Network Access Controls (NACs)
- **Detecting tools** – monitor and/or flag “abnormalities”  
Packet sniffers, intrusion detection, file integrity checkers,
- **Probing tools** – look for “soft spots”/vulnerabilities  
Vulnerability detection, compliance monitoring

34

Copyright © Scott Bradner & Ben Gaucherin 2016

---

---

---

---

---

---

---

---

### E45a Review: Security tools

- With every tool, be mindful of dual use
- **Offensive security tools** – active security investigation and/or disruption  
Packet generators/manglers/fuzzers, hijacking tools, brute force tools, fingerprinting tools

35

Copyright © Scott Bradner & Ben Gaucherin 2016

---

---

---

---

---

---

---

---

### E45a Review: Internet regulations

#### Internet Regulation

- **Telephone world is very well regulated**  
Regulations control technology, services, prices, & use  
International regulations from International Telecommunications Union (ITU)  
Plus national regulations - e.g., from Federal Communications Commission (in U.S.)
- **Internet is essentially unregulated**  
Major current conflict over the “need” to regulate the Internet

36

Copyright © Scott Bradner & Ben Gaucherin 2016

---

---

---

---

---

---

---

---

### E45a Review: Internet standards

#### Standards development

- Telephone standards developed by traditional standards organizations (e.g., ITU)
  - Members-only process
  - Consensus-based approval by government representatives

37

Copyright © Scott Bradner & Ben Gaucherin 2016

---

---

---

---

---

---

---

---

### E45a Review: Internet standards

I E T F®

- Internet-related technology standards are developed by the IETF
  - Open process, you-too can participate
  - "rough consensus" approval by technical community

38

Copyright © Scott Bradner & Ben Gaucherin 2016

---

---

---

---

---

---

---

---

### E45a Review: Wrapup

- This has been a review for some of you, for others it may be a preview
- In any case, this is useful information for you to have (even if it won't be on the exams)
- And it gives you additional information and context on what this course is about

39

Copyright © Scott Bradner & Ben Gaucherin 2016

---

---

---

---

---

---

---

---
