PREPARED BY THE BOARD OF NAVY COMMISSIONERS.

AND APPROVED

BY THE SECRETARY OF THE NAVY.

WASHINGTON:

PRINTED BY PETER FORCE.

1826.

DOCSMENTS: By Act of Congress dated February 7, 1815, the Board of Navy Commissioners was established. This Board's primary function, as Chapelle so aptly states in "History of the American Sailing Navy", was to "prepare rules and regulations necessary for securing uniformity of vessels, equipment and repairs or refitting..." In 1818 the Board published a volume titled "Rules, Regulations and Instructions for the Naval Services of the United States" which contained an appendix devoted to Tables of Allowances for the various classes of vessels in the Navy. This appendix was expanded and published as a separate document in 1826. On the next four pages the title page, table of contents and first table of this 1826 volume is reprinted. Model builders should find this table useful in reconstructing the spar plans of naval vessels for which no published list of masts and spars exist.

To amplify the rather short introduction given on page 146, the following data may be of interest. It was not until 1837 that the only Three Deck Ship of the Line, USS PENNSYLVANIA, was launched. She carried 120 guns instead of the 130 guns called for in the tables. Her tonnage was 3241 tons. You will find that the dimensions of her masts and yards follow the table given in Vol. 14, No. 2. On page 490 of Chapelle's HISTORY OF THE SAILING NAVY is a condensed list of her spars and masts. The next category, First Class Ships of the Line, include DELAWARE, 84 guns, 2633 tons, NORTH CAROLINA, 84 guns, 2633 tons, and OHIO, 84 guns and 2757 tons. Second Class Ships of the Line were FRANKLIN, 74 guns, 2257 tons, INDEPENDENCE, 74 guns, 2257 tons, and COLUMBUS, 80 guns and 2480 tons. In 1826, First Class Frigates included UNITED STATES, 50 guns, 1607 tons, CONSTITUTION, 50 guns, 1607 tons, POTOMAC, 50 guns, 1726 tons, and BRANDYWINE, 50 guns and 1726 tons. Second Class Frigates included CONSTELLATION, 38 guns, 1278 tons, and MACEDONIAN, 38 guns and 1325 tons. BOSTON and class, 18 guns, 700 tons, were rated as First Class Sloops in 1826, but were to be rated latter as Second Class Sloops. ONTARIO, 16 guns, 559 tons, is an example of a Second Class Sloop under these tables. This is not a complete list of each class as many names of existing ships for 1826 are not shown.

Proportions for Tops, Trestletrees, Crosstrees, and Caps.

Main Top—Breadth—One half the moulded breadth
of beam.
Fore Top—do. Nine tenths of Main Top.
Mizen Top—do. Four Fifths of Fore Top.

All tops must be in length two thirds of their breadth—must be made light, with upper cross trees upon the top over the lower ones, fayed down over the battens and well keyed together; the forward quarters of the tops to be sufficiently rounded to prevent chafing the sails.

Lower Trestletrees. { Length—The length of their respective tops.
Depth—Three fifths of their Masts at the Partners.
Breadth or thickness—One half the depth.

Lower Crosstrees. { Length—Breadth of respective tops.
Breadth—Breadth of respective trestletrees.
Depth or thickness—Two thirds of breadth.

Top Mast Trestletrees. { Length—Two fifths the length of lower trestletrees of their respective masts.
Breadth—One half the breadth of lower trestletrees.
Depth—One half the depth of do.

Top Mast.—Length. { After one—Three fifths of the after lower Crosstrees of their respective Masts.
Middle one—Five sixths of the after one.
Forward one—Five sixths of the middle one.

Crosstrees. { Breadth—The breadth of their respective trestletrees.
Depth or thickness—Four fifths of breadth.

Caps.—Bowsprit. { Length—Four times the diameter of the Jib boom.
 Breadth—Once and a half the diameter of the Jib boom.
 Thickness—One half the breadth.

All other Caps. { Length—Four times the diameter of their respective top masts, or top gallant masts.
 Breadth—Once and a half the diameter of top masts, or top gallant masts.
 Thickness—One half the breadth.

Notes on the foregoing Table of Dimensions of Masts and Spars.

- NOTE—1. The Mizen Mast is intended to step on the orlop deck; therefore, an allowance for depth, under the orlop, must be made.
 2. By the calculations here laid down, it is intended they should be made of Southern Yellow Pine; but if White Pine is used, it will be necessary to make their dimensions one fifteenth or one twentieth larger. White Pine should never be used for top masts.
 3. The checks of all lower Masts are to be terminated with a gradual taper, six inches below the orlop deck.
 4. In the lengths of lower Masts as above, the steps or heel blocks are included; but the lengths of the heel blocks of top masts being in some measure arbitrary, the lengths of top masts, as laid down, are exclusive of heel blocks.
 5. The diameter of the Bowsprit in the bed, to be that of the main mast in the partners; and the diameter at the main gunnioning that of the fore mast in the partners—And in all classes to be two thirds of its length outboard.
 6. The cap of the Mizen mast to be on a level with main Trestletrees.
 7. The relative proportions to be observed in the different parts of Masts are as follows, viz:—For the diameters of the smallest parts of lower Masts, say under the hounds, allow ten thirteenths in the partners—for their diameter in the wake of Trestletrees, allow nine tenths of their diameter under the hounds; and for their diameter at the upper part of head in the wake of cap, seven eighths of their diameter in the trestletrees. This will apply to the relative dimensions of top masts and top gallant masts, by considering the parts embraced by their caps as their partners. The upper parts of all mast heads, say at the upper part of the hounds, ought to be nine tenths of their diameters in the partners or cap.
